

# SAP® for contract logistics

Whether disposition, commission controlling, delivery, packaging or transport management –

abat is the logistics specialist for your company.

Logistics Execution Optimisation

## The task

Increasingly complex delivery chains demand more sophisticated business solutions. The majority of customers of contract logistics use ERP-solutions from the SAP® AG to support their own business processes. Even some logistics service providers use this software – at least in the area of management. For the core business in Warehouse however, special IT solutions are still in use. Contract logistics companies have to consistently work on their process efficiency to improve service level and stock alignment for the customer. Altered requirements cause new interfaces between customers and logistics companies – the more linked up the processes become, the more diverse, complex and costs-intensive the interfaces are. Since there is still great potential for improvements in the Warehouse management of SAP® concerning contract logistics, many service providers accept these additional costs.

## The solution

for this task is called SAP®LES in conjunction with LEO®, the add-on from the abat AG.

Based on these logistics components abat has succeeded in displaying processes transparently and efficiently with SAP®, even for smaller medium-sized companies. The interfaces posed no problems, neither did the degree of process networking to the customers, since they use SAP® as well.

As a competent partner abat supports you in the development of optimal and future-oriented logistics strategies and their conversion into tailored solutions.

For optimization of your logistics with SAP®, the abat AG is your competent technology and consulting specialist in Germany.

Our customers benefit from our 100.000 working days experience with international SAP® introduction and integration.

BRANCH FOCUS

## LEO® supports the optimization

and closes process gaps within SAP® interface-free. Result is a modular system for optimizing within Warehouse, in which the following components can be used separately:

### in the disposition of deliveries to

- LEFO
- FEFO
- Storage location

with optimization of the amount of unloading-sites.

### in monitoring of the delivery

on the level of batch splitting with the abat delivery monitor

- Order picking status
- WM-status
- WM-TA status
- Status work packages
- Amount of full pallets and picking units

### in monitoring of the shipping

With the abat shipping monitor

- Trucks on site
- Loading started
- Transport dispatched

### With being able to provide customer-related data

All information at a look:

- Customers' master data
- Orders
- Deliveries
- Transports
- Bills
- Unpaid itmes

with abat's CRM Light.

### Process optimization with LEO® means:

**Reduction of costs** through efficient planning of transports and minimized storage lead time.

**Better customer attachment and transparency** through integrity and the close look at customers' requirements concerning goods distribution (packaging defaults, delivery schedules etc.) as well as being able to monitor the way of the goods according to EU178.

# LEO

## Logistics Execution Optimisation

*„With the introduction of SAP® we have not only obtained an improved way of displaying the needs of our customers more transparently and efficiently, but we are also convinced that thereby we have become more attractive for other quality manufacturers and by using the latest information technologies have made another step towards expansion“, is the conclusion of the LZV-management regarding the successful realisation of the project.*

Are you searching for an efficient partner who provides you with project management, conception and realisation one-stop and who also has profound knowledge of finance, production and logistics processes? At abat you can feel that you are in the right hands.

Our service means “one-stop” full service.
