

SAP in shipbuilding

Repairs, conversions, additions or new constructions - abat is the branch expert for your company.

The market situation

Pressure of international competition in the shipbuilding industry is constantly increasing despite uneven market conditions. This means that co-operation in shipbuilding must be improved and the maritime network, which covers the large sectors of shipbuilding, shipping and port businesses, utilized fully, taking into account the overlapping themes of maritime environmental protection and safety. Internationalism should not be a foreign word to a branch that makes its home on the seas of the world. In this case, eCommerce and Internet platforms open up totally new opportunities for global co-operation. This is now made easier with the latest information and communication technologies.

The task

Competitive criteria not only include the price and quality of the ship product, but also delivery times, delivery readiness and flexibility. In order to meet these criteria, rationalization potential must be exploited to the full.

The integration

It is not sufficient to look at the individual logistic areas of production, procurement and distribution. Only a consistent overall strategy that encompasses all areas and also takes into account external customer and supplier relationships can achieve the necessary efficiency.

BRANCH FOCUS

As a competent partner in the shipbuilding sector, abat supports both shipyards and their suppliers in developing optimal and future-orientated strategies and implementing them through tailored SAP solutions.

abat AG is one of the leading SAP consultancy houses in Germany in the shipbuilding branch.

Our customers and partners benefit from our 100,000 project days worth of experience in international SAP introductions and integrations.

The service

We support our customers by creating a project proposal based on your budget and the effective dates with the support of our proven methodical procedure model.

Using the SAP project system, abat can optimize your calculations, budget planning and deadline controlling. In combination with the SAP finance and controlling areas, you will gain a constantly up to date budget monitoring and liquidity planning system. Capacity planning and resource management is supported by our introduction of SAP production planning, which integrates your structure and includes your production equipment, e.g. pipe and steel cutters, etc. Purchasing and warehousing round off the complete system.

Your in-house logistics processes are integrated by abat into the processes of your partner using EDI/WEB-EDI. abat offers business process analysis and optimization, feasibility studies and the realization of EDI integration from Converter up to the SAP system.

abat implements Internet integration with the SAP R/3 system: we help you in the analysis, conception and realization of the connections between SAP and market places, eProcurement and the processes of your business partners.

Our process knowledge of the shipbuilding industry allows us to rapidly assess technical operations and system conditions and to match them with the options in the SAP system. We are calculable: Offers, costs, project development – all areas are openly communicated by us.

Message exchanging with EDI or integration with the Internet: Our specialists integrate your requirements in the processes of the SAP system.

With our introduction method progress complementing ASAP by SAP, we will ensure your project success and create our project proposal: resources, time and costs will thereby remain transparent at all times.
