# ProcessPilot - creating process transparency

abat consult

## Creating structure. Gain transparency. Manage processes sustainably.

Why do companies waste so much time on coordination, training, and testing errors? It‘s because processes often only exist in people‘s heads, on paper, or in old files. Without a centralized view of processes, teams lack orientation. Scattered documentation slows down teams, complicates standards, and prevents reuse.

With our SMARTsolution ProcessPilot, you can start using professional business process management tools. First, we select a suitable tool if you don‘t already have one, and then we develop a visual process map as a starting point. This creates a central, connectable foundation for your digital transformation.

## Your added value at a glance

- Full transparency of processes: A clear view of processes, roles, and responsibilities increases collaboration and productivity.
- Identification of optimization potential
- Faster response times and a better basis for decision-making for digitalization projects, such as AI or RPA
- Centrally controlled process knowledge is available, up to date, and usable across teams.

abat is one of the leading SAP service providers for the automotive and manufacturing industries in Germany. Through our many customer projects, we have learned how important process visualization is. With our SMARTsolution ProcessPilot, we offer a structured approach to process management. The result is a central, connectable process foundation that can be expanded and used in various ways.

## This is how we will proceed:

- Carry out an initial analysis of the current status of process documentation and available tools.
- Hold a workshop to develop a visual process map as a central entry point.
- Transfer the analysis and workshop results into a business process management (BPM) roadmap.

## We deliver the following results:

- Evaluation of existing process documents, and support in selecting a BPM tool, if necessary
- Process map and visual representation of a customer-specific process in BPMN 2.0
- Roadmap for introducing and realizing a sustainable, future-proof BPM
