

Agentic AI Check

Are you ready to hand over tasks to autonomous agents?

Ready for handover or just technically feasible?

Autonomous agents fail because no one has checked whether the organization can really support the handover:

- Are your processes stable enough?
- Is your data of sufficient quality?
- Are responsibilities clearly defined so that an agent can act?

The Agentic AI Check answers exactly these questions before any effort is invested.

What does the Agentic AI Check deliver?

You get a reliable maturity assessment across five dimensions:

- **Processes:** Are they stable and rule-based enough for an agent to act independently?
- **Data quality:** Is it complete and reliable enough to serve as a basis for autonomous decisions?
- **Technical prerequisites:** Do your systems, interfaces and authorizations allow autonomous agents to be deployed?
- **Roles & responsibilities:** Is it clear who is accountable for an agent's output and who intervenes?
- **Readiness for change:** Do management and teams support handing over tasks to an agent?

abat is one of Germany's leading SAP service providers. We know the processes our customers work with every day, and we support them where artificial intelligence is changing that work. Technology alone does not change the way people work. That is why we bring both together: implementation in your SAP systems and the organization that supports it.

Here's how we do it:

- Kick-off meeting: defining objectives and scope
- Analysis workshops with process owners and business departments
- Review of data quality and technical prerequisites in the system
- Short survey of affected employees on their expectations and reservations

We deliver these results:

- Maturity assessment of your organization across all five dimensions
- High-level change concept for rolling out Agentic AI
- Suitability overview for each process
- Prioritized recommendation on where to start, with prerequisites and an implementation roadmap
- Management presentation as a solid basis for decision-making
