XR Starter Package

abat transform

What is XR?

Extended reality (XR) encompasses all forms of computer-generated environments that augment reality with digital content. This includes virtual reality (VR), augmented reality (AR) and mixed reality (MR). Digital elements are integrated into the physical world or a completely virtual environment is created.

What are the benefits of XR?

- Increasing efficiency and concentration as well as emotional connection through virtual training

- Reduction of development times through faster iterations when using virtual prototypes

- Fast decision-making thanks to three-dimensional visualizations

The abat XR Starter Package

- A proof of concept in your application can identify the benefits of XR, such as potential savings.

- Live demonstrations in the workshop character allow potential fields of application to be discussed and worked out.

- With the equipment provided, you will live an immersive experience with a high-definition 3D content and surround sound.

abat is one of the leading SAP and Technological Innovation service providers for the automotive and manufacturing industries in Germany, Mexico, and the USA. Implementing efficient process flows is our core business, and customized customer solutions are our secret to success. **And this means using XR in the right place and with the right tools.**

This is how we proceed:

- Introductory workshop on the basics of VR, this is implemented with the support of prototype samples.

- By developing a proof of concept, you will experience a use case with extended reality to learn more about the tool.

- You will get a clearer view of where VR can be applied within your company.

We deliver these results:

- Potential uses in selected areas of opportunity for the use of XR in your company.

- A project example in the form of a PoC with innovative technology to raise awareness of XR in your company.

- Roadmap for the next steps to implement VR in your company.
