SAP-Business Intelligence

SAP-Business Intelligence

The globalisation of the markets forces companies to be present everywhere. Information must be available both internally and externally - for customers and suppliers as well as increasingly also for public authorities - at all times and everywhere in optimum data quality. The extent to which this can be realised is one of the decisive factors for the future position of your company when competing for markets, customers and employees.

SAP offers besides the SAP Business Objects Suite and SAP BW now with SAP HANA, the possibility to make your corporate data optimally available to different stakeholders. Very large data volumes, complex calculations and real-time reporting are possible.

The task

For fast and above all right decisions you require a high-performance platform with which the required data can be presented purposefully. It is important to find the optimum MIX between the SAP BO Suite, SAP HANA and the tried and tested SAP BW solution based on SAP and non-SAP systems for your information management.

Based on the individual requirements of your company, we support you to select the correct combination of these systems and applications and implement them efficiently.

Our solutions consider the coherences of your IT structures already from the start. This way, the corporate boundary linked to data processing disappears and you enter new worlds of information acquisition, quality and distribution for your company.

The offer

With our team of experienced consultants, we stand for an integrated, corporate consultation approach that is geared to business practice: From the start our proposals include your business environment so that subsequent reconciliation adjustments are avoided. For you that means: Lower costs and a reduced time effort. Business Intelligence solutions are intended to make the operational processes more transparent and establish decisions on a secure and reliable information basis.

Precisely when achieving specific targets of business intelligence projects most effectively is the order of the day, considering the individual factors always plays an integral role: Standardised implementation methods will not bring you the desired effect. Owing to our experience we configure in cooperation with you a new, individual task and project-related method made up from the best components of various established methods - which is as individual as your company. This way we realise the basis to develop an innovative and at the same time tailor-made top solution on time and budget in cooperation with you.

We assure you the dedicated performance of the tasks assigned to us whilst acting result-oriented and with entrepreneurial spirit - i.e. we accompany you through a project management that keeps an eye on the specified targets regarding content and time, naturally coordinated up to the last detail with the owners of the departments and tailor-made to suit your company. This is our promise to you.

Our customers benefit from the experience of international SAP rollouts and integrations. abat assists you from the start when selecting the products and implementing the optimum solution for you up to the support and further development of your processes. In-depth branch know-how rounds off our profile.

abat is your competent support when developing and realising your sophisticated BI systems. Based on the individual development of the key performance indicators and control parameters that are decisive for your company over a „fitness check-up“ of your information sources up to the detailed technical realisation. For further details regarding our areas of expertise: Strategy Consulting, Organisation, SAP BI and SAP HANA as well as Application Management, please contact us for a personal talk or visit us at www.abat.de.

ABOUT US

abat

The abat Group, founded in 1998, is an SAP service provider, innovative software developer and provider of complete solutions for software-supported process optimization –

primarily in the core industries of automotive and discrete manufacturing as well as in logistics processes and production control. With our six service areas, we give companies the freedom they need for new ideas, efficient processes, and future-oriented solutions.

In the **consulting** service area, we advise and support you in all phases of an SAP project – from conception to implementation to operation of your SAP system. With abat **manufacture**, you receive digital, high-availability solutions for production control in the complex manufacturing industry. With abat **transform** we offer you innovative and unique solutions that make you special: from AI to cloud to X-Reality. The **PLM** area offers comprehensive process consulting with the goal of achieving a continuous data flow across PLM, ERP and MES. Offerings from the **protect** area help customers secure information and maintain the confidentiality, availability, and integrity of business relationships. Finally, our **sustain** experts advise on how sustainability and CSR reporting can be strategically and structurally anchored in the company.
