SAP Business Suite

powered by SAP HANA

Full service from abat around SAP HANA

SAP HANA offers a forward-looking platform to implement business processes significantly more transparently, flexibly and rapidly in an integrated manner in real-time without system interruptions.

Data is stored on a much faster main memory instead of a hard drive in a new in-memory appliance comprising hardware and software. The ERP processes that you already use can therefore be executed even more efficiently on a HANA database. The HANA database is a prerequisite for the use of future functionality in SAP.

What does the use of SAP Business Suite powered by SAP HANA offer you?

- Flexible, fast, secure and user-friendly processes for processing large and complex amounts of data
- The amalgamation of an analytical information system (OLAP) and online transaction processing (OLTP)
- Real-time evaluation of company data in the ERP system offers new decision-making paths
- Optimisation of performance-intensive processes, such as batch runs, material requirements planning (MRP) etc.

How can abat help you with your move to HANA technology?

abat provides on-site support at your premises with individual advice to check the requirements for the introduction and potential in your process flows. abat also guides you right from the start with the launch strategy and the implementation of the optimum solution for you through to support and further development of your processes:

- Development of a strategy suitable for you as well as IT architecture
- Consolidation of systems and development of a roadmap
- Decision-making support regarding HANA investments within the framework of a business case
- Upgrade and migration of your existing SAP ERP components and applications to SAP HANA incl. support with the selection of appropriate hardware
- Optimisation of BW applications on HANA as well as performance optimisation
- Development of customer-specific applications on the HANA database
- Optimisation of the ABAP source code with respect to the migration to HANA

In addition, we can show you the possibilities and potential of SAP HANA in a demo scenario geared towards your processes.

ABOUT US

abat

The abat Group, founded in 1998, is an SAP service provider, innovative software developer and provider of complete solutions for software-supported process optimization –

primarily in the core industries of automotive and discrete manufacturing as well as in logistics processes and production control. With our six service areas, we give companies the freedom they need for new ideas, efficient processes, and future-oriented solutions.

In the **consulting** service area, we advise and support you in all phases of an SAP project – from conception to implementation to operation of your SAP system. With abat **manufacture**, you receive digital, high-availability solutions for production control in the complex manufacturing industry. With abat **transform** we offer you innovative and unique solutions that make you special: from AI to cloud to X-Reality. The **PLM** area offers comprehensive process consulting with the goal of achieving a continuous data flow across PLM, ERP and MES. Offerings from the **protect** area help customers secure information and maintain the confidentiality, availability, and integrity of business relationships. Finally, our **sustain** experts advise on how sustainability and CSR reporting can be strategically and structurally anchored in the company.
