SAP Solution Manager 7.2

An innovative and comprehensive tool for your SAP environment

SAP Solution Manager – activate your IT potential.

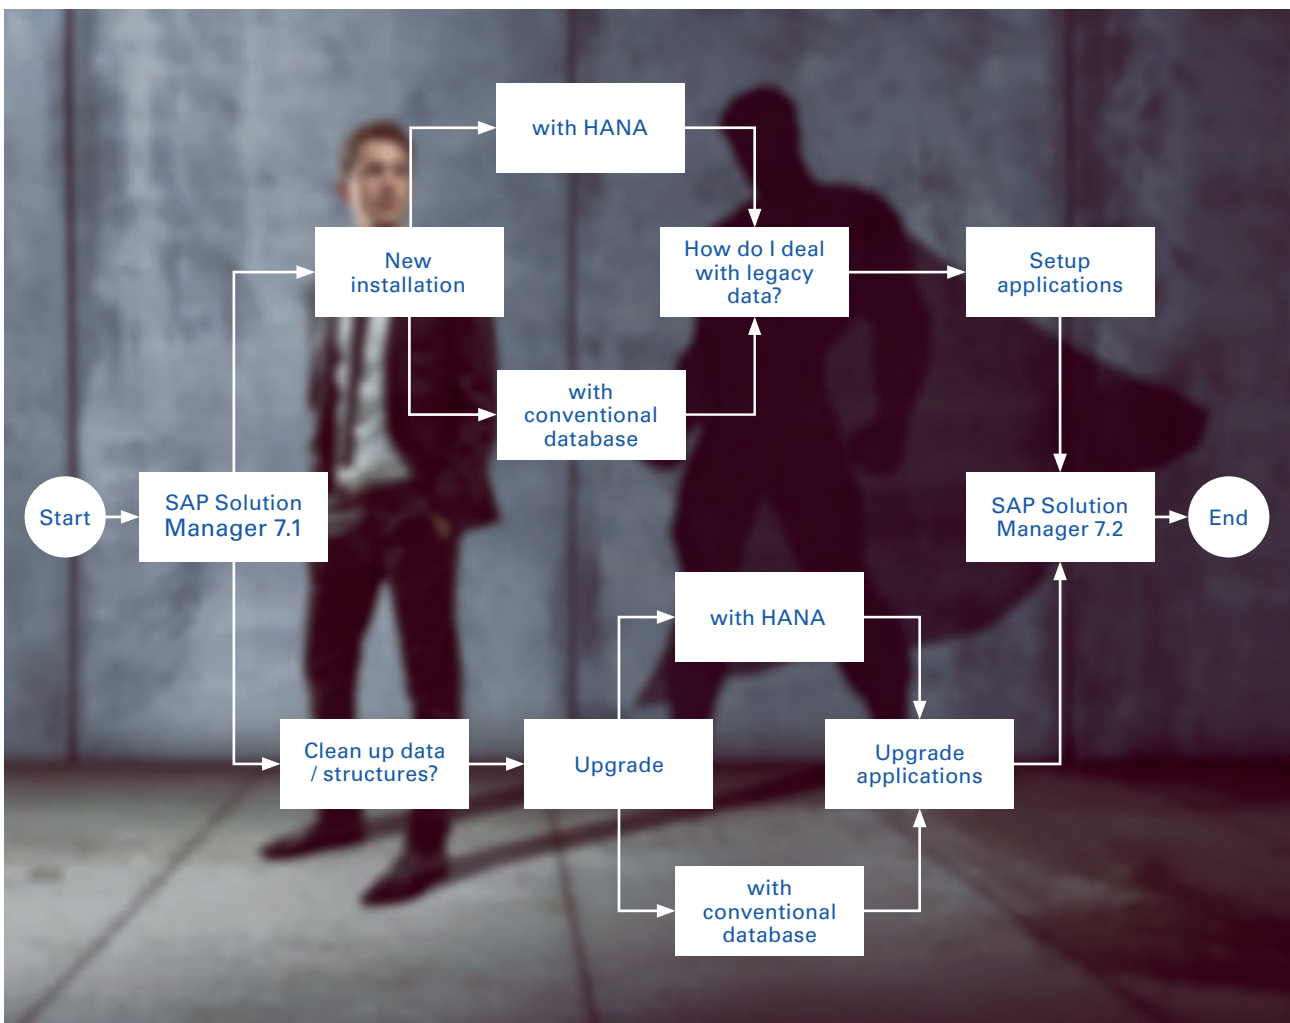

SAP Solution Manager is an all-purpose tool for your SAP system. As a central platform, SAP Solution Manager offers the right tool for a variety of needs. Additionally, this solution is ITIL certified, so you can use this tool for your SOX compliant business processes. SAP Solution Manager has matured not only for large businesses, but numerous projects prove that even smaller IT organizations benefit from the advantages of the SAP Solution Manager. As an SAP customer you enjoy the advantage that SAP Solution Manager does not need additional licensing, depending on your SAP maintenance contract. We have tips to help you on licensing options. You can discover the individual applications and their advantages in our whitepaper!

Switch to SAP Solution Manager 7.2

Maintenance from SAP for SAP Solution Manager 7.1 ended in 2017. The first customer version of SAP Solution Manager 7.2 was delivered in mid-2016. With this new release, you will find many changes. However, before moving to the new release, you will be confronted with the following questions:

- Do I choose to upgrade or to reinstall?
- Do I use the free SAP HANA database in the new release? Am I ready for a database change, or do I use a conventional database?
- When upgrading: What data do I still need and can I clean up structures?
- For new installations: Can I use my data? Which alternatives exist to access my legacy data?
- What would I like to use SAP Solution Manager for?

With all these questions, our experts will assist you and analyze your project in an on-site discussion.

New and improved features in SAP Solution Manager 7.2

Almost all applications are now available as a web application. The layout reveals the underlying UI5 framework. The well-known transaction solman_workcenter now is a central entry point for all applications in shape of the new Fiori Launchpad.

The mapping and modeling of business processes now take place in a completely new structure and you have the option to draw graphically processes that are automatically converted into a table structure.

Name	Type	Group	Path
BLP (DE) - Batch Management Sample Mast...	Building Block <Ref.>	Configuration	/Lösung/Geschäftsprozesse/SAP Best Practices Import (EN)/S/...
BD9 - Sell from Stock (EN)	Process Diagram	Diagrams	/Lösung/Geschäftsprozesse/SAP Best Practices Import (EN)/S/...
BD9 - Test script (EN)	Document (Best Practice)	Documentation	/Lösung/Geschäftsprozesse/SAP Best Practices Import (EN)/S/...
BD9 - Scope-Item fact sheet (EN)	Document (Best Practice)	Documentation	/Lösung/Geschäftsprozesse/SAP Best Practices Import (EN)/S/...

The test management has also been revised and is fully integrated into the mapping of business processes. New evaluations are available, which clearly stand out in their quality compared to the previous release.

The Support Packages for your SAP systems are now downloaded via the Maintenance Planner, which completely replaces the Maintenance Optimizer.

Get to know the application's top 3 advantages in our whitepaper! We would be happy to make an appointment to analyze your SAP Solution Manager.
